Release Notes

Bonzai Intranet
v2.2.4

Contents

1. Release Overview

Bonzai version 2.2.4 release is a point release that fixes a few issues and provides an additional improvement to caching in Bonzai.

Release Version	2.2.4
Release Date	November 23, 2019
Deliverables	▪ Release Notes ▪ Bonzai Intranet Deployment Package

2. Summary of Issues Fixed

2.1 Issues Fixed in v2.2.4

Detailed below are the fixes in this release:

- Admins are now able to specify **custom content types** to include in the display for the **News Rollup Web Part**. This fixes the issue where items were not showing up in the web part if they are not News Pages. (BOINT-12755, BOINT-12028)

- Fixed an issue where the **cache key** was not being saved locally on first load, causing additional term store calls when the page is refreshed. (BOINT-12030)

- **Locations Web Part** cards now wrap correctly to the next line when placed in smaller zones and at smaller screen widths. (BOINT-8437)

- Hitting the enter key when performing a search in the **Sites Directory** and **Locations Directory** no longer causes the page to refresh in o365. (BOINT-9346)

- The header image for the **Location Page Layout** is now responsive across different screen sizes, and no longer gets distorted. (BOINT-10297)

- Fixed an issue where some parts of the typeahead suggestions for the **Locations Web Part** were being rendered outside the dropdown container when using **Internet Explorer**. (BOINT-11020)

- Fixed white space in the lifetime views counter in News, Events, and Spotlight, and other search card headers. (BOINT-11695)

- Fixed vertical white space inconsistencies in Site Directory result items. (BOINT-9411)

3. Known Issues

- Due to the caching introduced in version 2.2, users need to run a browser refresh (ctrl+f5) to obtain the latest cache for any changes to list views/settings used in web parts. An update to resolve this is already being developed and will be included in upcoming releases.

4. System Requirements

Required software is noted below, with an emphasis on the following terms:
- **Certified** - this release was tested specifically against this configuration.
- **Supported** - this release was not tested against this specific configuration, though it remains supported as differences between it and the certified software are minimal or not applicable to Bonzai.

	Certified	**Supported**
Operating System	Windows Server 2016 with .NET Framework 4.5	Windows Server 2012 R2 with .NET Framework 4.5
SharePoint	SharePoint 2016 SharePoint Online	SharePoint 2013 w/ SP 1 or higher
Database	MS SQL 2016 Std	Bonzai supports the versions of Microsoft SQL that SharePoint supports (SP2013 | SP2016)

Web Browser	IE 11
	Chrome 72.0.3626.121

5. How to Install or Upgrade to this Release

Please contact success@skyvera.com for more information on how we can help you to upgrade to this release.

The Bonzai team will deploy 2.2.4 to our CDN on November 23rd, and republish the themes for 2.2 customers.

Customers running 2.2.0 and above will automatically be updated to 2.2.4 with no further action required on their tenants/farms.
