1. Release Overview

Bonzai version 2.0.0 release is focused on introducing new features, mainly focused on a brand-new design, as well as fixing issues reported by customers.

Release Version	2.0.0
Release Date	April 16, 2018
Deliverables	<ul style="list-style-type: none">■ Release Notes Documentation

2. What's New in this Release

2.1 Brand New Design

For 2.0.0, Bonzai brings a whole new look and feel for both desktop and responsive mode.

- Navigation is now sticky when scrolling – that is, it stays with you as you scroll down (or up) a page.
- Two new CSS variables have been added to allow for the mega navigation to be styled differently from the header navigation.
- Bonzai now supports a sticky header with an alternate sticky logo (logo-sticky.png).
- The **Document Portal** has been updated to be consistent with the 2.0.0 design.
- All **Content Pages** now have an updated look and feel to match the 2.0.0 design.
- **Advanced links**, **Event** and **Landing** web parts have been upgraded with an additional display template.
- The **Employee Directory** has been rebranded as the **People Hub** with an updated look and feel.
- Bonzai's new primary and secondary font is Lato.
- Added support for custom Google fonts.
- The home and landing page layouts have additional full width zones. Alternating rows now also display in a different color, configurable per customer.

2.1.1 Advanced Links web part

Advanced Links' existing Tiles mode now has a new look and supports a customizable tile color and icon available through web part properties.

Advanced Links now supports Font Awesome in place of Glyphicons.

Advanced Links now has a font size property that allows you to control the size of the font displayed in the web part.

2.1.2 Favorite Site web part

We've introduced a new **Favorite Sites** web part that matches the functionality of the Favorite Documents web part, displaying your favorite sites.

2.1.3 Font Awesome 5 Pro

Font Awesome 5 Pro replaces Glyphicons as the icon library provider for Bonzai v2.0.0. You may choose from four different font packages: brands, light, regular, or solid.

In addition, all Bonzai Images have been updated to the new 2.0.0 style with updated branding

2.1.4 Promoted Items

Promoted item support has been added to most content types and rollup web parts. Users can now tag an item as a promoted item and Bonzai will highlight that item in rollups.

2.1.5 Search

The Bonzai Search box has been upgraded to a typeahead experience that previews results and allows users to search more efficiently.

Additionally, each type of content has a new design and a general refinement of search in web parts.

2.2 Deprecated Items

Some features have been removed/replaced with the 2.0.0 release as they are no longer needed. They are listed below:

- Glyphicons are replaced with Font Awesome 5 Pro.
- Bonzai.search.min.css is no longer required and has been removed. Its function is rolled into bonzai.styles.min.css.
- Bonzai no longer supports the branding of Team Sites, and the team site branding has been removed.
- My Sites branding has been removed as Bonzai no longer support the branding of My Sites.
- Generic Pages no longer support the ability to upload a rollup image.
- Bonzai no longer provisions a Background Photo library.
- Delve web part has been removed and is no longer supported.

3. Summary of Issues Fixed

3.1 Issues Fixed in v2.0.0

Detailed below are the fixes in this release:

- Using a Content Search web part could break the page when paging through search results. This only occurred with multiple Content Search web parts on the page and has been fixed. (BONZAI-2945)
- Corrected an issue where refiners were not available in the People Hub web part listing view or search filter. (BONZAI-2947)
- The Document Portal and Search Box web part sorted options incorrectly. Options are now sorted correctly. (BONZAI-2952)
- Improved the performance of the Event Adds page when adding large numbers of attendees. (BONZAI-2583)
- "Sign in as a Different User" menu option now respects the 2.0.0 redesign. (BONZAI-2846)
- Corrected an issue where the page footer logo was not constrained in Internet Explorer. (BONZAI-2913)
- Removed the welcome menu in Office 365, as it was no longer needed. (BONZAI-2932)
- Corrected an issue where paging wasn't working properly while sorting a column that was of type Boolean. (BONZAI-2946)

- Wildcard search option is now correctly applied to the new typeahead search. (BONZAI-2949)
- Corrected an issue where the Events Content Search Display template would not wrap properly on Internet Explorer 11. (BONZAI-2956)
- The Landing Image renditions now have a better aspect ratio to better match the previous release. In addition, the Background Image rendition has been removed. (BONZAI-2807)
- Rollups no longer display paging results if the number of items returned matches the paging settings. (BONZAI-2808)
- Web parts added to pages pointing to lists or libraries that contained zero items no longer load indefinitely. They now display: "No items were found!" message. (BONZAI-2881)
- Bonzai now looks up the version of SharePoint and activates the corresponding master page when activating the branding feature. (BONZAI-2895)
- Clicking the Bonzai search icon now correctly kicks off a search, as intended. (BONZAI-2908)
- Corrected an issue where in the Grid View, Additional Results information has overlapping categories and text. (BONZAI-2952)
- The Advanced Links flyout would appear behind adjacent content. This has been corrected. (BONZAI-2959)

4. Known Issues

- Using an apostrophe in the search term can break typeahead, Employee Hub, and Document portal. (BONZAI-2970)
- The Advanced Links web part can improperly wrap in Internet Explorer. (BONZAI-2982)
- In certain circumstances, Yammer content could show as null. (BONZAI-2987)

5. Compatible Software

This release is compatible with the following software:

- Microsoft SharePoint 2013 with Service Pack 1 or higher, Microsoft SharePoint 2016, SharePoint Online
- Microsoft SQL Standard and Enterprise – note that this release of Bonzai supports the version of Microsoft SQL that SharePoint supports ([SP2013](#) | [SP2016](#))
- Web Browsers: This release of Bonzai supports Chrome, IE 9/10/11, Firefox and Safari
