1. Release Overview

Bonzai version 2.1.1 release is focused on introducing support for the new Font Awesome version, as well as fixing issues reported by customers and those revealed by internal testing.

Release Version	2.1.1
Release Date	November 6, 2018
Deliverables	<ul style="list-style-type: none">Release NotesBonzai Intranet Deployment Package

2. What's New in this Release

2.1 Font Awesome

For 2.1.1, Bonzai introduces support for Font Awesome version 5.4.2.

3. Summary of Issues Fixed

3.1 Issues Fixed in v2.1.1

Detailed below are the fixes in this release:

- Using a Content Search web part could break the page when paging through search results. This only occurred with multiple Content Search web parts on the page and has been fixed. (BONZAI-2945)
- The Employee Directory Search Results now has a default of 28 items per page instead of 30 in order to have a complete row at the bottom, since it's now displayed in 4 columns. (BOINT-1875)
- A status 200 response is no longer returned if there is a validation error in the Put User service. (BOINT-2399)
- User service errors no longer contain Service ARNs. (BOINT-2467)
- German, Italian, and Spanish have been added to the "Change Authoring Language" dropdown. (BOINT-2552)
- Added localized time zones for German, Italian, and Spanish. (BOINT-2553)
- Fixed webpart pagination for calculated values. (BOINT-2716)

- Added better handling when Term Store GUIDs are not set properly. (BOINT-2724)
- Fixed a circular dependency between `TermSetCollection` and `TermGroupCollection` that was causing a `TypeError` exception. (BOINT-3352)
- Addressed a caching issue that was causing the navigation to change after the site had already been loaded. (BOINT-4778)
- Removed Intercom Chat Bot. (BOINT-5199)
- Fixed Italian time zones. (BOINT-5370)
- Fixed Spanish time zones. (BOINT-5371)
- Added default image renditions support for more than 2 items per row in the Landing Webpart. (BOINT-5890)
- Fixed an issue that was causing the typeahead search to return an error. (BOINT-540)
- Removed sorting for "Enabled" column in Brick. (BOINT-1122)
- Component now successfully mounts even if a default customWebPartProperties object is not passed. (BOINT-1234)
- List and View options are now being reset when the site url is changed. (BOINT-1235)
- Now preventing BLANK values from being added as webpart properties to avoid casting errors. (BOINT-1236)
- Fixed an issue with displaying Promoted Items in People Listing Webparts when Show Profile Picture is unchecked. (BOINT-1242)
- It is now possible to search by Updated column in Brick. (BOINT-1317)
- Pagination no longer breaks when using calculated values for sorting. (BOINT-1343)
- Updated Brick's Google Analytics custom actions to GTag format. (BOINT-2060)
- User Profile page is now getting updated when editing the current user in Brick. (BOINT-2142)
- Document Portal web part now displaying correctly when used in a tabbed web part. (BOINT-2621)
- Advanced Link search results now open in a new tab for search display template. (BOINT-2664)
- Locations directory no longer disappears if no items are found and the Roll Up Notification option is enabled in BIA. (BOINT-2700)
- When Content Targeting is disabled in Brick, the "Enable Content Targeting" option is also hidden from webpart editors. (BOINT-2707)
- Feedback button can no longer be double-clicked, leading to accidental double submissions. (BOINT-2775)

- Commenting now indicates if there was a failure to post. (BOINT-2778)
- Comments can no longer be accidentally submitted twice by double-clicking. (BOINT-2780)
- Now showing an image associated to a document in a Documents Table Roll-up web part. (BOINT-3014)
- Clicking on Site collection button in Edit Bonzai configuration now navigates to Edit Bonzai page. (BOINT-3204)
- It is no longer possible to use ItemCollection.updateByID using an invalid column name. (BOINT-3354)
- Removed hardcoded GUID in terms store error message. (BOINT-3356)
- Updating the same page twice no longer requires a page reload in between. (BOINT-3358)
- Fixed an issue causing the Stocks symbol field to repopulate itself in Brick configuration page after being cleared. (BOINT-3447)
- In Employee Directory Web Part, entering a leading space in the search field no longer causes an error. (BOINT-3636)
- Setting Document Rollup Web Part to 2 columns is now working. (BOINT-3875)
- Roll up image of Configured Slider web part no longer exceeds the container in edit mode page. (BOINT-4368)
- Search results using Bonzai SRWP Spotlight Item display template no longer have their text concatenated with no white space. (BOINT-4536)
- Fixed minor typos and date formatting in Italian translations. (BOINT-4687)
- Fixes and improvements to results count display. (BOINT-4863)
- Adding special characters in Stock Symbols is no longer allowed. (BOINT-4885)
- Weather widget now displays the next 5-day names consistently relative to which time zone the selected location is in. (BOINT-4931)
- Fixed pagination issue with People Listing Web Part. (BOINT-4951)
- Removed pagination controls when all favorite docs are displayed in Favorite Document Web Part. (BOINT-5010)
- Improved validations in Brick for Search Result Display Count. (BOINT-5030)
- Search terms are now preserved across multiple search navigations. (BOINT-5218)
- Fixed non-standard style for StartDate missing error message. (BOINT-5261)
- Commenting no longer blocks further actions on the page until the post is complete, as network availability checks are now asynchronous. (BOINT-5515)

- The Document Portal List Item no longer tries to convert everything to dates by default if they are of a type that is convertible to date in the Additional Information Section. (BOINT-5794)
- User associated with customer type account can no longer set focus on License field and version field value from edit Bonzai installation page. (BOINT-5908)
- Set a limit and validation of 500 items per page for Document Portal webpart. (BOINT-5940)
- Improved mandatory field validation messages on Brick Theme Editor. (BOINT-5953)
- Added email field validation for Brick User creation. (BOINT-5954)
- Changed validation message on Market place webpart when location is empty to something more descriptive and helpful. (BOINT-5955)
- Fixed the display of 'Terms of Use' on Marketplace Webpart. (BOINT-6076)
- Numerical fields in Brick Theme Editor now have the unit 'px' extracted so they can accept purely numbers. (BOINT-6089)
- Fixed an issue with not being able to type on custom settings text box in Document portal webpart property. (BOINT-6135)
- Fixed an error where selecting the Bonzai CSWP Document Portal Item as a display template was throwing an error in Content Search Webpart. (BOINT-6154)
- Now made axios to pass parameters properly like header and body. (BOINT-6161)
- Fixed an issue with Brick Global Search not displaying results until you click outside the field. (BOINT-6207)
- Fine-tuned behavior of Location validation message in Marketplace Webpart. (BOINT-6230)
- Added validations to make Logo Width and Border Radius required fields in Bonzai Theme Editor. (BOINT-6231)
- Added required validation for fields in Brick Theme Editor. (BOINT-6232)
- Sorting in Site Directory Webpart now also considers time in addition to date when choosing "Newest" or "Oldest" as sort options. (BOINT-6587)
- Added proper handling of missing fields when a Bonzai Spotlight Item Template is used to display a non-spotlight item in search results. (BOINT-6592)
- Now preventing the addition of an empty "show more" element to the page when there is no "show more" text configured in the Spotlight Rollup webpart. (BOINT-6594)
- Checks were added in order to avoid issues caused by unassigned theme to customer or its account, causing Brick to fetch a theme that doesn't exist in the account. (BOINT-6596)
- Fixed an issue with Critical Type Important Message not being dismissed after clicking on the 'x' button. (BOINT-6611)

- Fixed the jerkiness of the closing/opening behavior of the tabbed webpart. (BOINT-2738)
- Fixed an issue with inconsistent display of the 'Clear All' button on the Employee Directory Webpart when additional filters are selected. (BOINT-4805)
- Replaced node-fetch library with axios to provide better compatibility with iPad browser for Brick. (BOINT-4807)

4. Known Issues

- In Brick, there is a limit of 60 users that is returned by Cognito.
- In Brick, performing a search using the refiners only filters the existing dataset, so when searching for a theme, configuration, or site that is not in the list, use Global search.
- A customer has reported a mixed-content (https + http) issue when trying to use the built-in Yammer commenting engine.

5. Compatible Software

This release is compatible with the following software:

- Microsoft SharePoint 2013 with Service Pack 1 or higher, Microsoft SharePoint 2016, SharePoint Online
- Microsoft SQL Standard and Enterprise – note that this release of Bonzai supports the version of Microsoft SQL that SharePoint supports ([SP2013](#) | [SP2016](#))
- Web Browsers: This release of Bonzai supports Chrome, IE 9/10/11, Firefox and Safari

6. How to Install or Upgrade to this Release

Please contact Support@Skyvera.com for more information on how we can help you to upgrade to this release.

6.1 Customers Running a Bonzai Release Prior to 2.1

Customers running a release prior to 2.1 should open a Support ticket or contact Support@Skyvera.com for assistance in upgrading to this release.

6.2 Customers Running Bonzai 2.1

Customers running 2.1 will be automatically upgraded to version 2.1.1.

As 2.1.1 is a point update, customers should perform the following steps for full compatibility:

1. Deploy the CDN components from the Bonzai Deployment Package.
2. Deploy Brick using the Bonzai Deployment Package.
3. Perform the following minor steps in SharePoint to synchronize some elements with the update:
 - a. **Bonzai_SRWP_AdvancedLinks.html** (Archive/_catalogs) needs to be reloaded into the **Site settings > Display Templates > Search**

1. [Click here](#) to download the updated display template. Right-click anywhere on the page and click **"Save as..."**
2. Save the document (don't change the filename) somewhere on your computer.
3. Log in you SharePoint and navigate to **Site Settings -> Display Templates -> Search** and upload the file you downloaded.
4. Save the uploaded file and publish a new major version.

*Performing the above steps causes **Advanced Link Search Results** to correctly open in a new window if the item was configured to do so.

Skipping this step will cause **Advanced Link Search Results that have been configured to open in a new window to continue to do so only in the Webpart and Typeahead Search, but open in the active window for the Content Search results, as it currently does.

- b. Delete the Display Template for **Bonzai CSWP Document Portal Item** in SharePoint.

1. Log in to SharePoint, and navigate to Site Settings.
2. Go to **Display Templates -> Search**
3. Find the **Bonzai CSWP Document Portal Item** display template and delete it.

*Performing this step will remove the obsolete template from the options in the Content Search Webpart, and eliminate the error related to its use in 2.1.0

**Skipping this step will trigger an error where the Content Search Webpart Content is unable to load when the obsolete template is selected in the Webpart Configuration.

- c. Add these four new Image Renditions to SharePoint (**Site Settings -> Image Renditions**):
 - i. **"Bonzai Landing Image Three Column"**, "427", "343"
 - ii. **"Bonzai Landing Image Four Column"**, "315", "180"
 - iii. **"Bonzai Landing Image Five Column"**, "250", "143"
 - iv. **"Bonzai Landing Image Six Column"**, "207", "118"

*Adding these new image renditions will improve the image display for Landing Webparts when set to 3 or more items per row.

**Skipping these new Image Renditions will cause display issues when using the Landing Webpart and configuring to display 3 or more items per row.

4. Open the site's theme in Brick and republish.

Please contact Support@Skyvera.com for assistance upgrading or with questions.
