BONZAI INTRANET

BONZAI
A SKYVERA COMPANY

TABLE OF CONTENTS

1. Release Overview

Bonzai version 2.1.4 release delivers important improvements to elements of Bonzai such as the navigation, Important Messages web part, and the Tabbed Web part.

Release Version	2.1.4
Release Date	March 16, 2019
Deliverables	• Release Notes • Bonzai Intranet Deployment Package

2. Summary of Issues Fixed

2.1 Issues Fixed in v2.1.4

Detailed below are the fixes in this release:

- Navigation matching of active links are now working up to the third level. (BOINT-7437, BOINT-7947)

- Made the white space between labels and values in the event details section of an Event Page more dynamic, preventing any overlaps or "run-intos" with each other. (BOINT-7744)

- Promoted Results in the typeahead search no longer display with a star (similar to the favourite documents/sites), but instead now come with a check ✔, more consistent with the Best Bets results of OOB Sharepoint. (BOINT-7627, BOINT-8032)

- Tabbed Web Parts having multiple tabs no longer exceed the container width in IE, and overlap the adjacent zone. (BOINT-7645)

- Important message that have already been dismissed no longer appear again after a page refresh. (BOINT-7579)

3. Known Issues

- Although we are now setting a 24-hour cache expiration for the javascript in CDN, some browsers may take a couple of tries before it replaces its cached bonzai.min.js and bonzai.styles.min.css

with fresh copies from CDN. If this happens, you have the following cache-busting options to refresh your cache immediately:

- Open the link to bonzai.min.js in a new tab. Hit ctrl+f5 to force a refresh of the file.

- Open the link to your theme (after republishing) and perform the same force refresh.

4. Compatible Software

This release is compatible with the following software:

- Microsoft SharePoint 2013 with Service Pack 1 or higher, Microsoft SharePoint 2016, SharePoint Online

- Microsoft SQL Standard and Enterprise – note that this release of Bonzai supports the version of Microsoft SQL that SharePoint supports (SP2013 | SP2016)

- Web Browsers: Although Bonzai works on most modern browsers, Bonzai officially supports the following:

  1. Internet Explorer 11

  2. Chrome version 72.0.3626.121 (desktop + mobile)

  3. Safari, latest (mobile)

- Although Brick works in Firefox, official support is currently limited to the latest Chrome version only.

5. How to Install or Upgrade to this Release

Please contact success@skyvera.com for more information on how we can help you to upgrade to this release.

As 2.1.4 is a point update, and no SharePoint components were directly impacted, there will be no backend deployment necessary for this upgrade.

The following steps will be executed by the Bonzai Team, and require no action from the customer:

1. Deploy the CDN components from the Bonzai Deployment Package.
2. Deploy Brick using the Bonzai Deployment Package.
3. Republish site themes in Brick.
