## 1. Release Overview

Bonzai version 2.1.0 release is focused on introducing additional language support, as well as fixing issues reported by customers.

Release Version	2.1.0
Release Date	August 6th, 2018
Deliverables	<ul style="list-style-type: none"><li>■ Release Notes Documentation</li></ul>

## 2. What's New in this Release

### 2.1 Language Support

For 2.1.0, Bonzai now supports German, Italian and Spanish Languages. On-Premise installations should have the associated SharePoint language pack installed for full support.

### 2.2 Weather

The weather component now handles the wind state. It will also now default an image if a weather state is not matched so that the city and weather remain visible.

In addition, the weather API URL has been updated to be more user friendly.

### 2.3 Content Pages

Content pages now default to the page layout rollup image rendition instead of requiring users to specify one.

### 2.4 Document Portal and Employee Directory web parts

The Document Portal and Employee Directory web parts now allow you to set the default template on load, list or grid.

## 3. Summary of Issues Fixed

### 3.1 Issues Fixed in v2.1.0

Detailed below are the fixes in this release:

- Corrected an issue where Yammer commenting was not functional. (BONZAI-2974)
- Comment count now properly appears for display templates that are in the same site as the content being shown. (BONZAI-2961)
- Typeahead, Employee Hub and Document Portal no longer break when an apostrophe is used in the search term. (BONZAI-2970)
- Events Rollup web part will display event location if populated. If not, it will display a Google Map. If neither are populated, nothing is displayed. (BONZAI-2958)
- Corrected an issue where on Mobile navigation could get cut off if there were more items than fit on the screen. (BONZAI-2976)
- Advanced Links tile mode, when viewed in responsive mode, now properly adjusts width for four items in a row or more. (BONZAI-2977)
- Events that are full, with no page contacts, for which the current user is not attending now properly show the full event notification. (BONZAI-2978)
- Search Refiner web part now displays correctly in responsive mode. (BONZAI-2980)
- Advanced Links web part list view now properly wraps in Internet Explorer. (BONZAI-2982)
- Event Calendar API call no longer fails to load if Pages API overloads Site Settings. (BONZAI-2996)
- Bonzai now properly handles Boolean values coming back in alternate languages from content pages. (BONZAI-2997)
- Bonzai Events result type now uses the proper content type name for the query rule. (BONZAI-2979)

## 4. Known Issues

- Replies can be orphaned when a parent comment is deleted. (BONZAI-60)
- The Site Directory can fail to load if any of the site owners no longer have profiles. (BONZAI-2719)
- Marketplace Terms and Conditions are not displaying a required after opting that they be required. (BONZAI-2732)

## 5. Compatible Software

This release is compatible with the following software:

- Microsoft SharePoint 2013 with Service Pack 1 or higher, Microsoft SharePoint 2016, SharePoint Online
- Microsoft SQL Standard and Enterprise – note that this release of Bonzai supports the version of Microsoft SQL that SharePoint supports ([SP2013](#) | [SP2016](#))
- Web Browsers: This release of Bonzai supports Chrome, IE 9/10/11, Firefox and Safari
